

Phylogenetic tree showing the relationships between various *Trypanosoma* species and mutants. The tree is rooted at the bottom left and branches out to the right. The x-axis represents genetic distance, with labels at 0.00, 0.01, 0.02, and 0.03. The y-axis represents different species and mutants. The tree shows that *T. evansi* RoTat (WT) and *T. evansi* MU10 (M282L*) are the most closely related, followed by *T. evansi* STIB805 (A281del). *T. equiperdum* IVM-t1 (WT) and *T. equiperdum* BoTat (A273P) are also closely related. *T. evansi* OVI (WT) and *T. brucei* TREU927 (WT) are the most distantly related species shown.

Species and Mutants (from top to bottom):

- T. evansi* RoTat (WT)
- T. evansi* MU10 (M282L*)
- T. evansi* STIB805 (A281del)
- T. equiperdum* IVM-t1 (WT)
- T. equiperdum* BoTat (A273P)
- T. evansi* OVI (WT)
- T. brucei* TREU927 (WT)
